

- **PROBLEM STATEMENT TITLE:** Exercise Helper
- **TEAM NAME:** Nova Dojo
- **TEAM LEADER NAME:** Anant Prakash Sharma
- **TEAM LEADER EMAIL:** apstbate2713gd@gmail.com

PROBLEM STATEMENT

(DESCRIBE THE PROBLEM YOU ARE ADDRESSING)

People often don't know what exercises are suitable for their current location, equipment, or physical state

Existing fitness apps require manual input – they don't understand natural context like "I'm at a park, what can I do?"

Generic exercise plans ignore the user's surroundings, fitness level, and real-time constraints

PROPOSED SOLUTION

(DESCRIBE YOUR IDEA/SOLUTION/PROTOTYPE)

Users describe their situation naturally → App recommends suitable exercises

Example: "I'm at a public garden with no equipment and 20 minutes" → curated workout plan

Future upgrades:

1. A conversational AI fitness assistant that understands context-aware queries

2. Larger Exercise Data

3. Open CV integrations for tracking exercises

TECHNICAL APPROACH

Built with: HTML + CSS + JavaScript only(currently)

- Zero external libraries or frameworks
- Entire app lives in ONE .html file

Hosted on vercel

Future plans:

- Use of ai apis such as Gemini api in future

FEASIBILITY AND VIABILITY

Already built and working – live demo ready

- No backend, no server, no database needed
 - Hosting cost: ₹0
- Maintenance: minimal – just a text file to update
- Open source – anyone can fork, improve, contribute
- Beginner-readable code – encourages new contributors

IMPACT AND BENEFITS

Removes the #1 barrier to exercise: not knowing what to do

- Accessible to anyone with a phone and a browser
 - No gym membership or equipment required
- Lowers the barrier for students, remote workers, elderly
- Encourages small, consistent movement over big gym sessions
 - Open source – community can add exercises, languages, themes

RESEARCH AND REFERENCES

- WHO: 1 in 4 adults globally are insufficiently active (2022)
- Exercise db
- OpenCV(for future)
